TEMPLATE DOCUMENTATION

Thank you for purchasing this template and hopefully you will find it easy to update and use.

You'll find well organized Pages, Swatches, Paragraph, Character Styles, Object Styles and Layers.

Each template has been all set up for you and is ready to go.

This help file will explain how things are organized and used, and includes tips on editing your templates.

WHAT TO DO:

After purchase at first you have to open the help.txt file.

What's included in Help.txt file:

1. Template Feature
2. Template File Formats
3. Required Fonts Link

What's included in this Documentation:

A Step by Step Tutorial for easy and quick customization.

FROM THE AUTHOR:

I hope you will find everything you need in this documentation to edit/customize with your content.

If you have any questions about the template or this help file, you can contact me through the profile.

INSTALLING FONTS

1

2

3

4

5

Font Management Software:

You may also be using font management software such as Extensis Suitcase, in which case you can refer to your particular software's help file on installing fonts in your programme.

DOWNLOAD

Unless you already have the following fonts installed on your computer, you will need to download and install them before editing the template.

For example required font is **Raleway**, available for download from the following link:

<http://www.fontsquirrel.com/fonts/raleway>

INSTALL

Below are some simple instructions for installing font(s) for your operating system:

- Ensure you include all the different 'weights' (bold, italic, extra bold, etc.) when installing the font as there will be a separate file for each of these.
- You will probably have to restart the any programme already opened like InDesign, Adobe Photoshop etc, before any newly installed font is available for use.

Windows 8

- Extract the fonts, from the downloaded ZIP file, to any directory.
- Select the fonts and right-click (or double click an individual font).
- Select Open (in the case of several selected fonts).
- Click Install from the preview window (1).

Windows 7 & Vista

- Extract the fonts, from the downloaded ZIP file, to any directory.
- Select the fonts and right-click.
- Select Install (2).

Windows XP, Windows 98 & Windows 95

- Copy & Paste the fonts into the Fonts Folder, usually found in C:\Windows\Fonts (3)
- **Note:** Don't extract the fonts directly into the Fonts Folder (say, from a Zip file), as they won't install correctly. You must extract them somewhere else first then Copy/Paste them over.

Mac OSX

- Place the font files into /Library/Fonts (for all users) or into / Users/ Your_username/Library/Fonts (4)
- **Note:** If you have Font Book installed, double-clicking on the font file will open Font Book automatically. You'll see a dialog box with a preview of the font. Press 'Install Font' (bottom-right of the window) (5) and the font will be installed.

"If you still have any trouble installing fonts just get help from Google/Youtube."
