Photoshop

STEP BY STEP TUTORIAL

01. Installing Requirements:

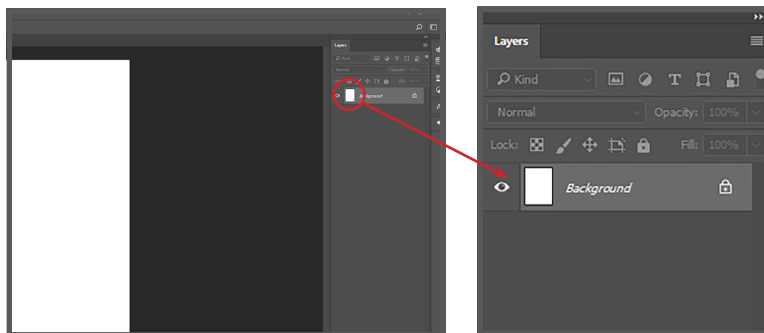

First thing first. Download and install all the **Required** things like **Fonts**, listed in the help file.

02. Open The Document:

After extracting the **Main_files.zip** file, double click on the **filename.psd** file to open the photoshop document you just purchased.

03. Turn On Layer Panel:

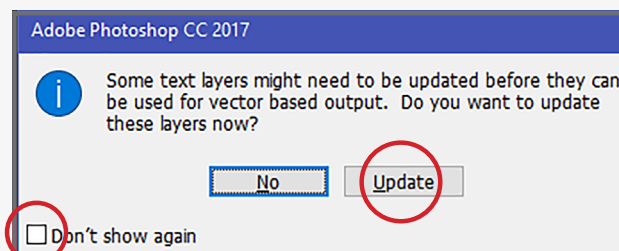

Press **F7** to show/hide Layer Panel.

Layers are everything.
Every item is layer based.
Layer let's you **Customise** or **Edit**
your purchased item.

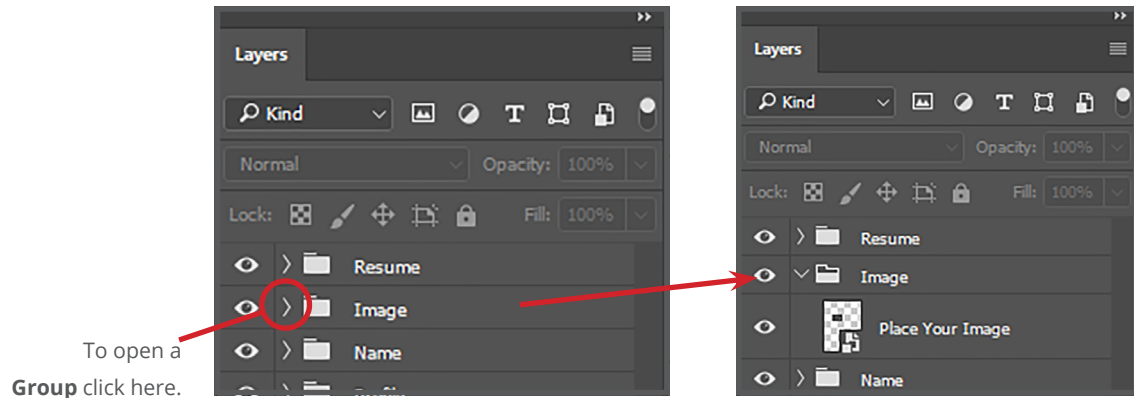

Sometime this window may appear.

Don't Worry nothing wrong with your file. Simply **Mark** Don't show again **Box**. After that **Click** Update.

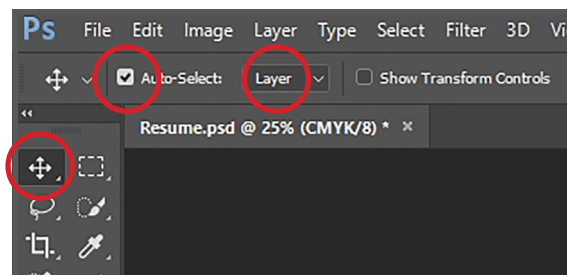

04. Ungrouping or Opening group:

Look at the **Layer panel** to access all the layer of the design template you just purchased. All design section are **Grouped**. Press **Ctrl+Shift+G** in order to ungroup or you can just open any group to get the layer inside.

05. Move Tool:

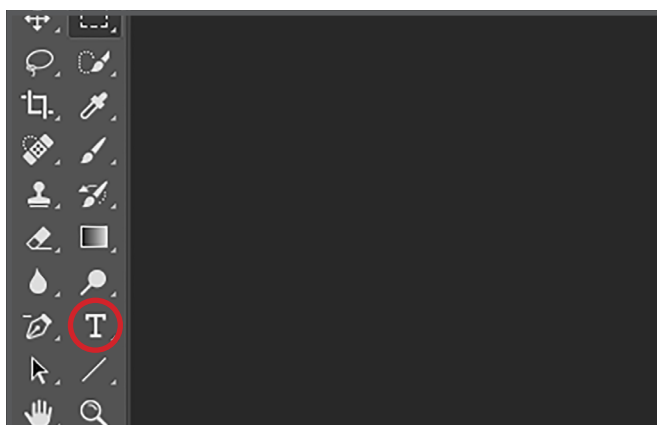

In order to **Move** an object to your desired place of the design, select the **Move Tool** first. Then select the layer of that object. You are ready to move the object now. To select a layer, just **click** on any object in the document. You will see the layer is **selected** in the layer panel.

“Check the **Auto Select** Option. And select layer option to easily select any Layer.”

06. Editing Text:

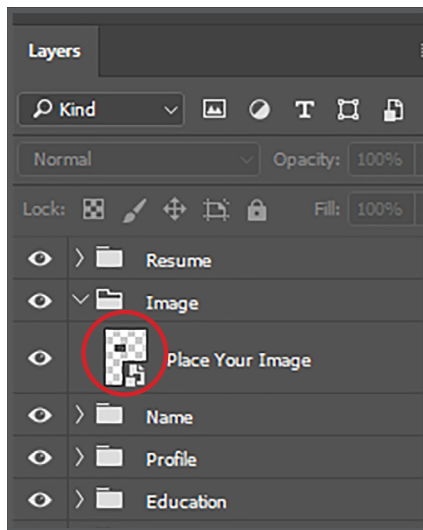

Fully Editable Layers can perfectly consume your **own texts** in a blink. We always try to keep it **easy and simple**. Just press **T** to select the **Type Tool**. Or simply select **Type Tool** from **Tool Pannel**.

Just click on any text with the **Type Tool**. Edit as you like.

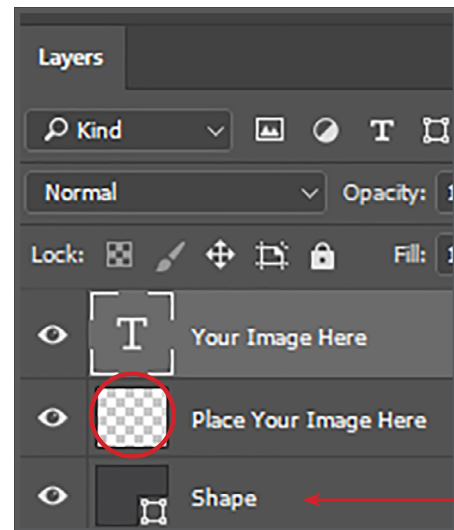

After editing Press **Ctrl+Enter** to release.

08. Changing Image or logo Via Smart Object:

Double click
on the **Smart
Object** layer.

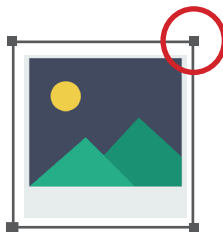

You will find
the **Layer
Pallette** like
this.

Background
shape

Drag & Drop Your Image on **Red Circle** Marked Position.
For **PNG Images** please **Delete / Hide** the Background **Shape**.
For **Non-PNG Images** please **Don't Delete / Hide** the Background **Shape**.

07. Changing Image or logo Size & Position:

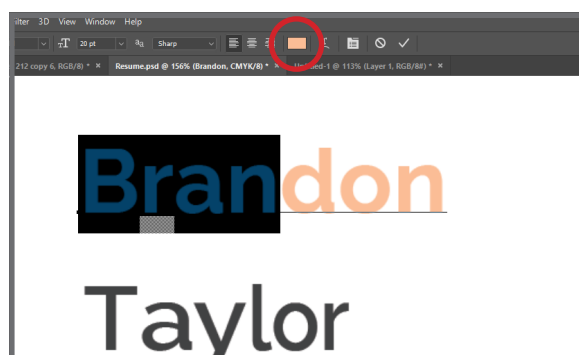

You can move the image by **Move Tool** to fix the view.

To resize, press **Ctrl+T**.

Don't forget to press **Shift** key and Drag from any **Corner** of that image to maintain aspect ratio of that image during resizing.

10. Changing Color:

10.1. Changing **Text** Color:

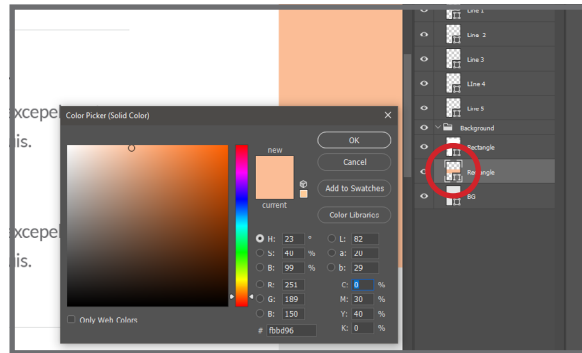

Just select the text with **Type tool**.

Click to bring the **Color Pallate**.
Change as you like.

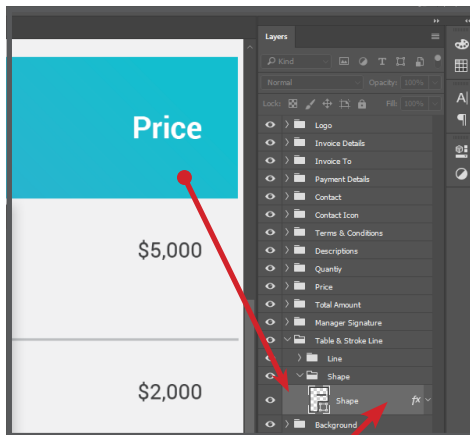

Press **Ctrl+Enter** to release.

10.2. Changing the **Object** color:

Select any **Shape** from your layer panel which you need to change the color. **Double Click** to bring the **Color Pallate**. Change as you like.

11. Gradient Color change:

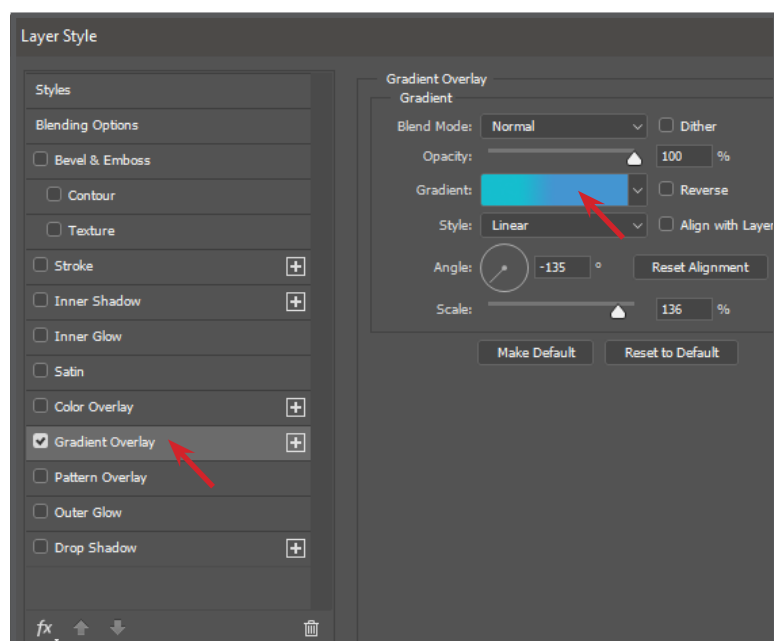

Double Click here to open Blending Option.

To change the **Gradient** of any shape or text, select that object with **Selection Tool**.

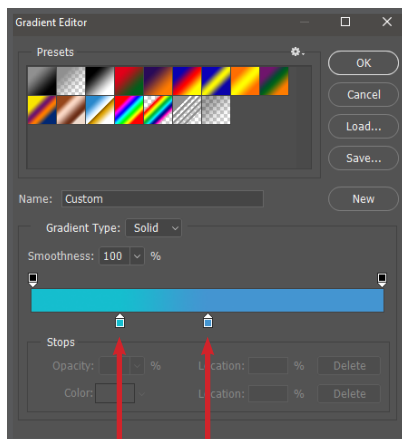

Now **Double Click** on the layer to Open **Blending Option**.

From there select **Gradient Overlay**. You'll see gradient option there.

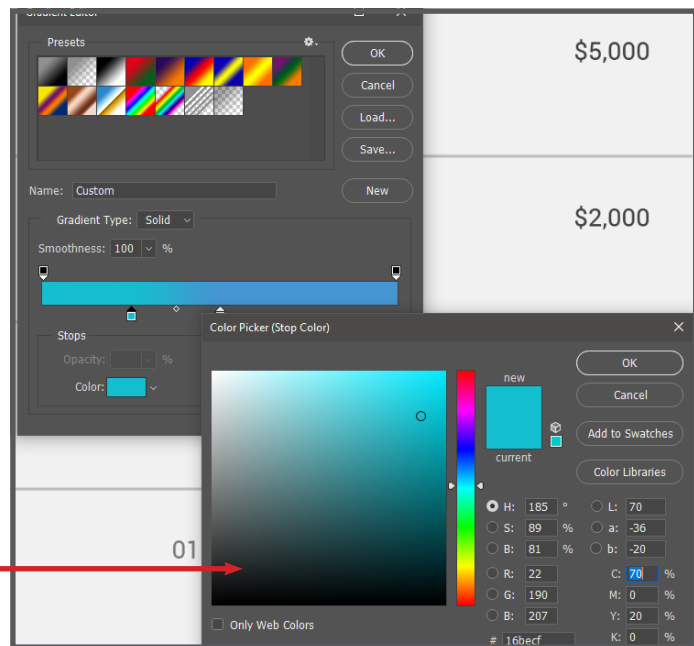

Now **Double Click** on the **Gradient Swatch**.

This will open **Options**, to change the **Color** of the Gradient.

Here you can **Change** the Gradient color. Just **Double Click** on this and a color chaging window will appear.
