01. Installing Requirements:

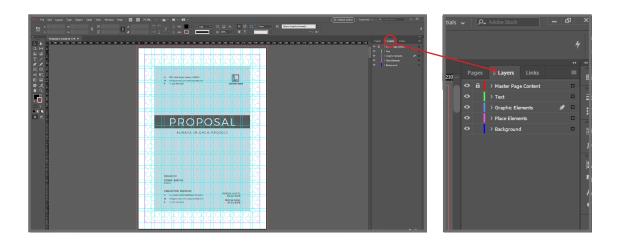

First thing first. Download and install all the **Required** things like **Fonts**, listed in the help file.

02. Open The Document:

After extracting the **Main_files.zip** file, double click on the **filename.indd/.idml** file to open the InDesign document you just purchased.

03.Turn On Layer Panel:

Press **F7** to show/hide Layer Panel.

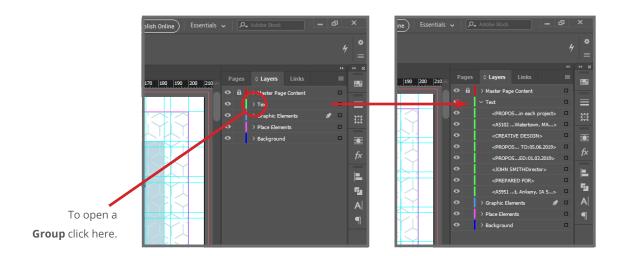

Layers are everything.

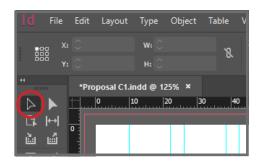

Every item is layer based.

Layer let's you **Customise** or **Edit** your purchased item.

04. Ungrouping or Opening group:

Look at the **Layer panel** to access all the layer of the item. Every design selection are **Grouped**. Press **Ctrl+Shift+G** in order to ungroup or you can just open any group to get the layer inside.

05. Move Tool:

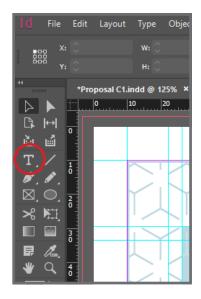

In order to **Move** an object to your desired place of the design, select the **Move Tool** first. Then select the object. You are ready to move the object now.

To select a layer, just **click** on any object in the document. You will see the layer is **selected** in the layer panel.

06. Editing Text:

Fully Editable Layers can perfectly consume your **own texts** in a blink. We always try to keep it **easy and simple for editing.**

Just press **T** to select the **Type Tool**. Or simply select **Type Tool** from **Tool Pannel**.

Just click on any text with the **Type Tool**. Edit as you like.

After editing Press **Ctrl+Enter** to release.

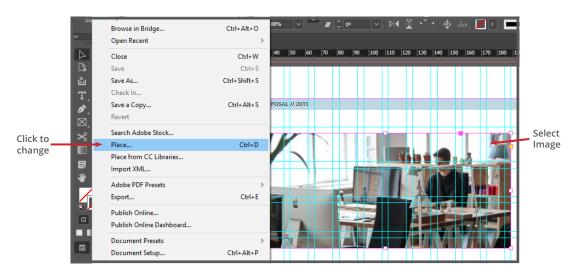

07. Changing Image or Logo:

There is various way to change the **Image or Logo** in Adobe illustrator. But we work hard to make it **Easy** for our clients to change **Image or Logo** on their purchased product. We're gonna guide you through easiest way to change image or logo.

07.1. Changing Images:

Click on the **Object**.

Go to the **File Menu** then click **Place** to change your image as you like.

07.2. Changing Logo:

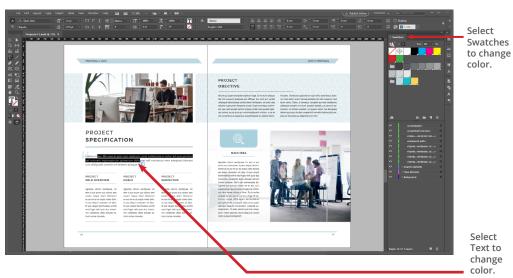

Just **Drag & Drop** your **Logo** into the Document.

You can move the **Logo** by **Move Tool** to fix the view.

Don't forget to press **Shift** key and Drag from any **Corner** of that logo to maintain aspect ratio of that image during resizing.

08. Changing Color:

08.1. Changing **Text** Color:

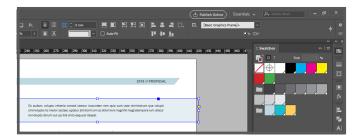

To change the color of your text, just **Select** the text with **Type tool**.

Click on the **Swatches** to bring the **Color Swatches**.

Change as you like by selecting color swatches.

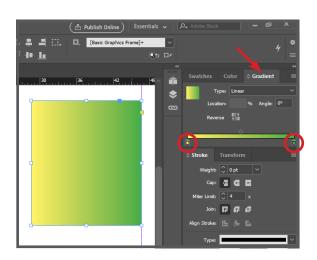

Press **ESC** to release.

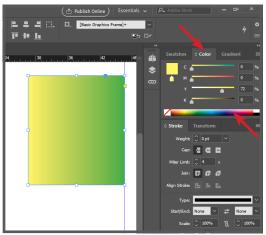

08.2. Changing the **Object** color:

Select any **Object** from your document which you need to change the color. **Select colore swatches** to change the color.

09. Changing Gradient:

To change gradient select **Gradient** from panel option. To change the color select single **Color** palate. Then go to **Color** from panel option. From there change your it to your desire color.

11. Editing Master Pages:

Go to the panel option then Click Pages.

Double-click on a **Master Page** in the Pages Panel to display the master page. **Remember**, there is a left and a right page to the master, so be sure you are on the page you want to be.

You are now able to make global edits to your document by inserting **Text Boxes** and **Graphics** the same way you would on the normal pages. You can also add columns that will affect all pages related to the master.
